

Design and Technology

Our children will explore everyday products in order to understand how they work; including thinking critically about the effectiveness, functionality and suitability of each product for the intended purpose.

Our children will critically evaluate finished products, both their own and others, to establish if it meets the intended user's needs and to identify how it could be improved.

Through a clearly defined practical, hands-on process, our children learn how to take risks, be resourceful and innovative.

Our children will confidently apply knowledge and skills from construction, textiles and food technology to make quality, well finished products.

Our children will be exposed to creative design briefs based on real and relevant problems to design products for a specific user.
